Marsden Weigh Beams:

A rugged, portable alternative to platform scales

When you need a more portable alternative to the platform scale, that costs less and uses up less storage space yet still provides accurate, precision weighing, choose Marsden weigh beams.

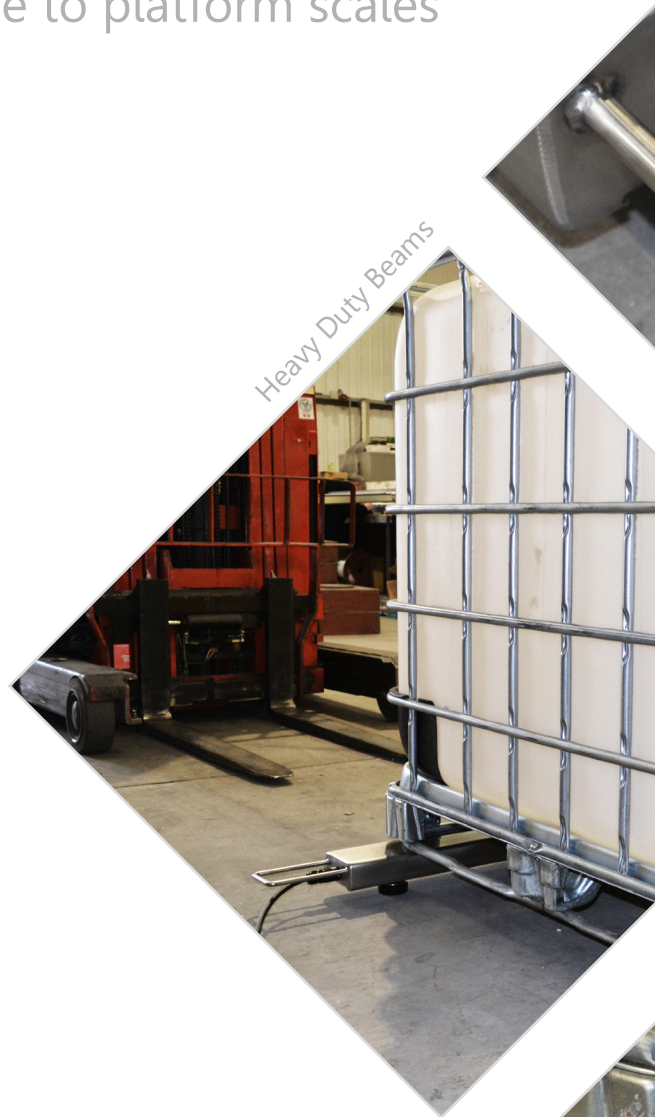

Why stainless steel weigh beams?

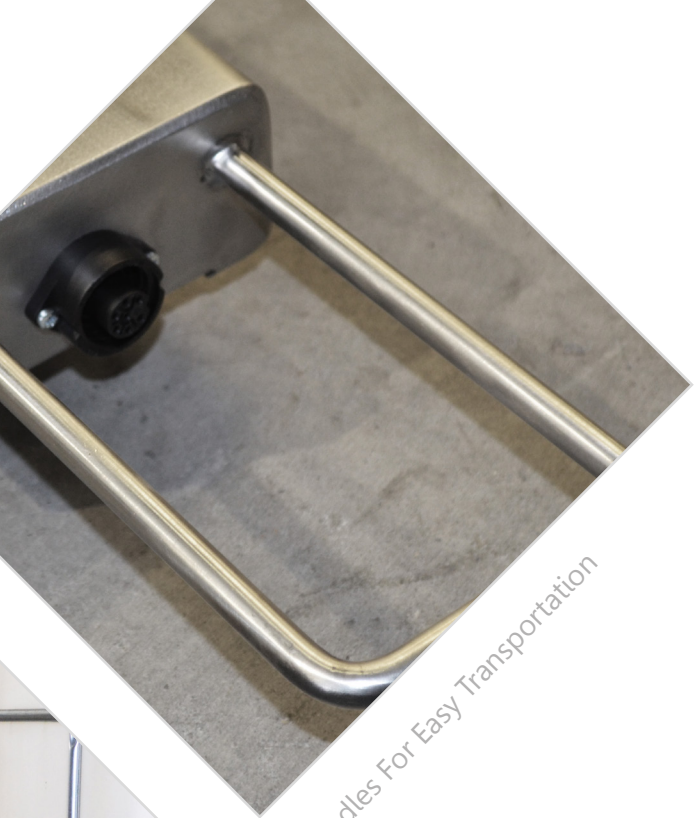

Being two separate weighing beams, PB-SS-1200s can be placed at any distance apart - so you're not restricted to weighing a set size of pallet or vessel.

Weigh beams also allow you to easily weigh pallets using a pallet truck - unlike a standard platform scale, the pallet truck can simply slide between the beams.

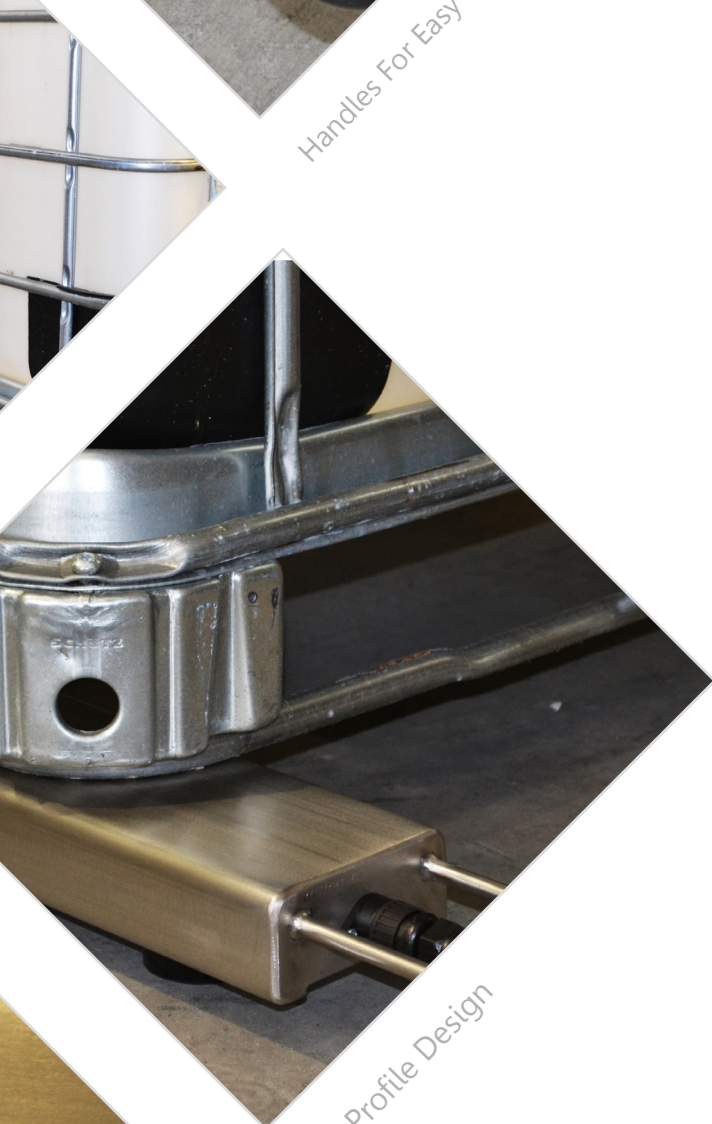

PB-SS-1200 Weigh Beams are waterproof to IP67, too - meaning they can withstand constant use in damp and humid conditions. 304 food grade casing makes them ideal for the food industry.

There are a number indicator options available too - from IP65-rated splashproof indicators to IP67-rated waterproof solutions, either Trade Approved or non approved.

Handles For Easy Transportation

Low Profile Design

They're portable

Marsden PB-SS-1200 Weigh Beams are cased in tough, splashproof stainless steel, with each one boasting a built-in carry handle. This means our weigh beams are durable and hard-wearing, yet easy to move around your premises.

Wheels are also fitted to the end of each beam, so you don't even need to carry the beams - simply pull them along from location to location!

The smaller design - compared to platform scales - means weigh beams can be easily stored away, taking up minimal space.

They're built to last

The PB-SS-1200 provides strength, durability and reliability - and being stainless steel, they look the business, too.

Each beam has two load cells, and these are fitted into the underside of the beam for protection. Levelling feet can be adjusted to ensure the beams sit straight and true, even if the ground they're on is a little uneven.

It comes with a choice of indicators

A range of indicators available means you can choose a solution that exactly meets your needs. All options are available as Trade Approved or non-approved. Get in touch if you have any questions.

As an IP65-rated indicator, the I-100SS can be wiped down. It is the entry-level option for stainless steel weigh beams, and has a rechargeable battery with a long life, a mains adaptor and Zero, Tare and Pre-set Tare. The screen is backlit and easy to read even in poor lighting conditions. The I-100SS can be supplied as approved or non-approved.

The I-200 indicator is IP67-rated, so can withstand regular washing down as well as constant use in damp and humid conditions. A stainless steel indicator, it's extremely durable and has Zero, Tare and Pre-set Tare functions, as well as a bright red LED backlit display and brackets for wall mounting.

The premium Trade Approved indicator solution for your weigh beams is the mains rechargeable, IP67-rated JIK, the ultimate check weighing indicator. The JIK boasts numerous features, including a hi/lo alarm with visual traffic light that indicates when a weight target has been reached, meaning no waste.

The JIK has a relay board, which means the JIK, the PB-SS can be used for loading a vessel without the need for supervision - protocols can be set up so that, when a target weight is reached, the loading of the vessel stops.

Being IP67-rated, the JIK can be used in harsher environments.

For more information and for any non-standard indicator options, please get in touch.

Product Specifications

Capacity: 600kg - 2000kg

Graduations: 200g - 500kg

Power Supply: Mains rechargeable (indicator)

Dimensions: 1250 (1400 with handle) x 120 x 88mm
