

seca 645

Wireless multifunctional handrail scales

EMR-integrated

- Stable railing provides support during weighing.
- Extremely flat, large platform.
- High capacity.
- BMI function.

seca 645:

Optimum stability.

The diagnosis and therapy of disabled or heavy patients calls for products which meet specific requirements. The seca 645 hand rail scale has been especially designed for use in hospitals, rehabilitation centers, nursing homes as well as in dialysis centers. The seca 645 helps to make everyday medical life a little easier.

Stable railing to support patients during weighing.

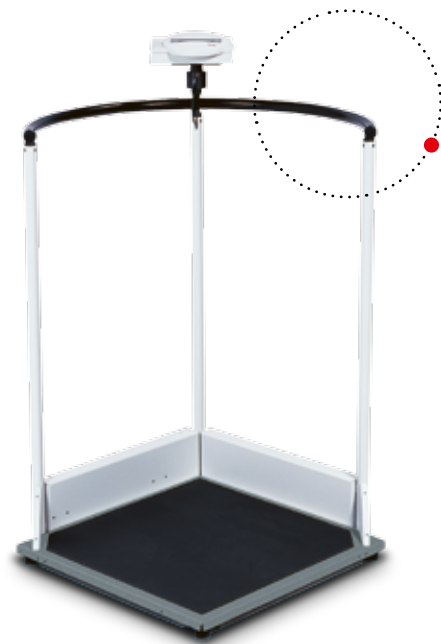

The seca 645 gives its users a unique advantage: the tough and firmly installed railing provides the patient with a safe handhold before, during and after weighing. This, of course, means that the strain on the nursing staff is considerably relieved making it so much easier for them to attend to their patients.

Especially flat, large platform.

The non-slip platform with a height of only 55 mm makes the scale easy to mount – even for older patients and orthopedic patients. A further advantage: a chair can be placed on the generously dimensioned platform so that patients can be weighed while sitting down. The weight of the chair can first be stored with the pre-TARE function and then automatically deducted from the measured weight of the patient and chair.

Easy to fold together and transport.

With a capacity of 300 kg, the seca 645 is ideal for weighing heavy patients. When fitted with the optional seca 223 measuring rod, the height of the patient can also be determined during the weighing process. With the BMI function capability, one can determine the ratio of the weight to the height at the touch of a button, thus supplying objective data on the nutritional.

Since the handrail is part of the weight-sensitive area, measurements are extremely accurate even if the patient supports himself on it.

The display can be rotated in every direction.

Easy to transport and non-reliant on mains supply.

Thanks to its rubber wheels, the hand rail scale seca 645 can easily be moved around the ward to each patient. This mobility is also enhanced by the fact that the scale can be supplied by power from either power adapter or rechargeable batteries.

The optional measuring rod permits weighing and measuring in one step.

seca 645

Technical Data

- Capacity: 300 kg
- Graduation: 100 g < 200 g > 200 g
- Dimensions (WxHxD): 640 x 1,150 x 660 mm
- Dimensions platform (WxHxD): 557 x 55 x 557 mm
- Weight: 25.4 kg
- Power supply: Power adapter, rechargeable batteries
- Functions: TARE, pre-TARE, HOLD, auto-HOLD, BMI, auto-CLEAR, auto weighing range switch-over, damping, automatic switch-off, SEND/PRINT
- Optional: measuring rod seca 223
- RS232 compatible
- Approval class: III
